

Description of the Preferred Embodiments

Please amend the Description of the Preferred Embodiments lines 13-17 as

follows:

(Currently amended) Referring now to the drawings, Figure 1, Element 1 illustrates the capsule device. Travel through the human body is facilitated by casing that encloses and protects the transmitter and power unit. Element 2 is the transmitter that will issue the distress signal identifying the location of the individual and element 3 is the power unit that will supply the energy to the transmitter.
